SUMMARY

Dedicated and results-driven **Software Engineer with 5+ years of experience** in building scalable and secure server-side applications. Proficient in **Node.js, Express.js, NestJS, REST APIs, GraphQL, microservices and databases (MongoDB, PostgreSQL, Redis)**. Skilled in **Docker, AWS, Kubernetes, and performance optimization**, with a track record of delivering maintainable solutions.

SKILLS

- Language: JavaScript, TypeScript
- Backend: Node.js, Express.js, NestJS
- Frontend & Mobile: React.js, Next.js, React Native, Redux, Tailwind CSS, Material UI, Ant Design, Bootstrap
- Authentication & Authorization Protocols: JWT, OAuth2
- Database & Caching: MongoDB, PostgreSQL, Redis, Prisma, TypeORM, Mongoose
- API Design: Rest, GraphQL, Microservices, Message Queues (RabbitMQ, BullMQ)
- Validation & Security: Input Validation, Rate Limiting, Helmet, CSRF Protection
- Design Patterns & Architecture: Decorator Pattern, Dependency Injection, Module Pattern, Singleton, Factory, Strategy, Chain of Responsibility, Observer, Proxy, Facade, Adapter
- Cloud & DevOps: Docker, AWS(EKS, EC2, VPC, S3, Lambda, RDS, OpenSearch, GuardDuty, CloudFormation, CloudWatch), Kubernetes(Helm, Istio, Cluster Autoscaler, Metrics Server), Cloudflare
- CI/CD & Version Control: Git, GitHub Actions, GitLab CI/CD
- Monitoring & Logging: Prometheus, Grafana, Winston, ELK Stack
- Payment Gateway: Stripe, SSLCOMMERZ
- Operating Systems & Scripting: Linux (Ubuntu), Bash scripting, Shell scripting
- Tools: Jira, Trello, VS Code, DevTools, NPM, Yarn, Webpack, Figma, Swagger, Postman, GraphQL Playground, pgAdmin, MongoDB Compass, MongoDB Atlas, Jest, Supertest
- AI-Assisted Development Tools: Claude Code, Cursor, GitHub Copilot, Codex

PROBLEM-SOLVING

- [HackerRank](#)
- [LeetCode](#)

PROFESSIONAL EXPERIENCE

1. Company: Chromatics AI LLC

Designation: Senior Software Engineer (September 2025 - Present)

- Architected and scaled a distributed microservice-based backend platform using NestJS, TypeScript, PostgreSQL, Prisma ORM, Redis, and Docker, separating core product APIs

from ingestion/scraping worker services to improve scalability, deployment agility, and fault isolation.

- Designed and delivered AI-powered backend workflows integrating OpenAI and Claude APIs, including contextual conversation pipelines, memory/context orchestration, classification, content enrichment, query refinement, and retrieval-driven response systems for personalized user experiences.
- Built secure, production-grade authentication and authorization systems using JWT, OAuth/social login (Google, Facebook, Apple), OTP verification, password reset flows, token lifecycle management, and route-level access guards to protect APIs and user data.
- Engineered resilient asynchronous processing pipelines using Bull/BullMQ and Redis queues, implementing retries, exponential backoff, schedulers, worker orchestration, and job observability to support scalable, fault-tolerant background processing without impacting API responsiveness.
- Developed high-throughput data ingestion and normalization pipelines for RSS, WordPress, and external media sources using Cheerio, scraping/parsing techniques, and API integrations, with deduplication logic, filtering guardrails, and structured persistence strategies to ensure data quality and consistency.
- Led backend engineering quality initiatives by standardizing DTO/schema validation, exception handling, API contracts, CORS/security hardening, and Swagger documentation, improving maintainability, onboarding efficiency, and cross-team integration.
- Improved platform reliability and delivery confidence through automated testing strategies (unit and end-to-end), maintainable service boundaries, and production-focused backend practices aligned with scalable system ownership.
- Collaborated closely with product and cross-functional teams to translate ambiguous business requirements into scalable backend solutions, balancing rapid delivery, long-term maintainability, and system performance.

2. Company: The Red IT (Remote)

Designation: Senior Software Engineer (November 2024 - September 2025)

- Led development and maintained some key features of the Woztell chatbot platform(both SaaS and PaaS solution), leveraging AWS services including Lambda, Express.js, and GraphQL, achieving scalable, reliable, high-performance, and cost-efficient deployments.
- Integrated extensions such as Calendly and Airtable using AWS Lambda serverless functions to enhance WhatsApp flows.
- Planned and implemented a custom Single Sign-On (SSO) system for the inbox module, enabling seamless and secure cross-application authentication.
- Managed Kubernetes-based single-tenant PaaS deployments for client-specific isolated environments, ensuring security and customization.
- Optimized platform performance by implementing separate read and write databases, significantly improving system scalability and responsiveness.
- Enhanced the inbox performance by 60% through in-depth code refactoring and optimization of legacy modules.
- Collaborated cross-functionally to ensure high-quality deliverables, contributing to improved reliability and user experience across the platform.

3. Company: Sayburgh Solutions Limited

Designation: Senior Back End Developer (February 2022 - October 2024)

- Led and mentored a team of 4 developers in building high-performance RESTful and GraphQL APIs for a multi-tenant SaaS-based HR management system, as well as VOD streaming, online

education, and ticketing platforms, ensuring scalability, security, and adherence to OOP and design pattern principles.

- Designed and optimized database schemas in MongoDB and PostgreSQL, implementing indexes, joins, aggregation pipelines, and rate-limiting strategies for system stability.
- Implemented Redis caching, Docker containerization, and CI/CD pipelines to streamline deployments and reduce release cycles.
- Built multitenancy support in the HR management system, enabling scalable onboarding of multiple organizations within a single deployment.
- Contributed to a vod platform mobile application development using React Native alongside backend responsibilities, supporting cross-platform feature delivery and backend API integration.
- Contributed to a restaurant management system using microservices architecture, leveraging gRPC for inter-service communication and RabbitMQ for asynchronous messaging to ensure scalability and reliability.
- Facilitated code reviews to uphold software engineering best practices and maintain a clean, testable architecture.

4. Company: Jirle (Remote)

Designation: Software Developer (September 2022 - December 2023)

- Developed and maintained an e-commerce platform using NextJS for the frontend and NestJS for the backend.
- Delivered RESTful APIs, documented them using Swagger, and ensured high performance, security, and reliability.
- Refined PostgreSQL database design, improving query efficiency.
- Applied Redis caching and Docker for containerized deployments.
- Participated in code reviews to ensure code quality, consistency, and adherence to best practices.

5. Company: Brain Station 23 Limited

Designation: Associate Software Engineer (January 2021 - September 2021)

- Contributed to three client projects (Robi Axiata Limited and two international clients), providing high-quality, user-focused solutions.
- Developed responsive and interactive front-end applications using React.js, Angular, and Vue.js, with TypeScript for refactoring and error handling.
- Implemented Redux store for efficient state management and improved performance.

EDUCATION

Daffodil International University (2015–2020) – B.Sc. in Computer Science & Engineering

Dhaka Megacity College (2012–2014) – H.S.C. in Science

Safiuddin Sarker Academy & College (2010–2012) – S.S.C. in Science
